

# Overview of the Contact Lens Marketplace – Part 2

**Wallace W. Lovejoy**

Lovejoy Eyecare Consulting LLC

On behalf of the National Association of Optometrists and Opticians

# 2017 Prescriber Supply and Practice Modality

- There are approximately 42,900 US optometrists & 16,700 ophthalmologists
- Roughly 12,500 ODs are affiliated with optical retail chains (11,300 locations); most do not sell contact lenses or eye glasses. \*
- Nearly 26,000 ODs are involved in private practice (24,000 locations) and typically sell contact lenses and eyeglasses.
  - Prescriber owned chains (e.g., Vision Source, My Eye Dr., Eye Care Partners, Ossip, TSO, Today's Vision) are considered "private practice" and are not included in the optical chain location count.

# Changes in the supply of optometrists and eyewear retail locations

- 1975 – 20,000 active ODs, 85% self-employed, with most of the the rest employed by other ODs.
  - ODs performed 29 million eye exams, 57% of the 51 million total.
- 1986 – 24,500 active ODs, 73% in private practice
- 2003 – 22,500 independent prescribers selling CLs; approximately 16,500 other retail locations
- 2012 – 40,000 ODs in active practice - 22,800 (57%) independent; 9600 (24%) in affiliation with optical chains; 18,000 ophthalmologists
  - ODs performed 88 million refractive eye exams (of 104 million)

# Practice Formats for Chain-Affiliated Doctors

- Independent Contractor – typically an optometrist (but may be a physician) with a sublease or license agreement for an equipped office (may be more than one) co-located with an optical retailer
  - Most sublease and license agreements specify that the prescriber will not sell eyewear. Some allow the prescriber to sell contact lenses.
  - This is this most frequently used format, covering over 80% of the locations.
  - The sublessee/licensee often employs optometrists to staff the office(s).
- Direct employee of the optical retailer
  - Estimated to be 5-10% of the optical retail locations.
  - Most states prohibit the corporate practice of both medicine and optometry.
- Franchise
  - Estimated to be 5-10%.
  - The owner may be a prescriber or an optician/retailer, and may employ or contract with prescribers.
  - The franchise sells eyewear.

# Who Prescribes Contact Lenses

- In 2013, ODs performed 85% of the comprehensive eye exams in the US and wrote 90% of the prescriptions for corrective eyewear.
  - Contact lens exams were 27% of the refractive exams by ODs.
- In 2017, independent ECPs (including OMDs) performed 63.3% of CL eye exams.
  - ODs affiliated with optical retailers performed 28.1% of CL eye exams.
  - 8.7% of CL wearers reported “other/don’t know” where they got the exam.
- Presumably, ophthalmologists wrote under 10% of the Rxs for CLs.
- In 2017, independent ECPs sold 37.3 % of contact lenses.
  - This suggests ophthalmologists sold under 4% of contact lenses.
  - Many ophthalmologists have limited or no dispensaries, or have a sublease or license agreement with an optical dispenser who sells corrective eyewear.

# Contact lens share by product modality

## Dollar share (from industry sources)

- One day wear = 40-45% and growing
- 2 week = 20-22% and declining
- Monthly = 30-35%
- GP/Specialty/Custom = < 5%

## Patient share (from Vision Council):

- Daily Lenses in 2017: 28.7%
- Weekly: 22.3%
- Monthly: 39.8%
- GP/Specialty/Custom: 9.2%

# Impact of Vision Care Insurance on Contact Lens Sales

- Employers often offer vision benefits as an option, and individual and family plans are also available. Monthly premiums for an individual typically are \$10-20.
- About 50% of US adults have vision care coverage; all children with health insurance have vision care (the ACA made pediatric vision care an “essential health benefit.”)
- About 50% of contact lens buyers report using vision care benefits in their last purchase of contact lenses. Nearly 2/3 of eyeglass buyers used vision care benefits.
- Major vision plans include VSP, EyeMed, Davis
  - An eye exam with refraction is a typical benefit, often with a co-pay (\$10-20).
  - A dollar allowance for eyeglass frames and lenses is also often included; generally \$115 - \$150 (some higher priced plans offer higher allowances.)
  - The eyewear benefit in many plans can be used for contact lens fitting/evaluation and product.
  - Plans may also provide discounts on services and products beyond allowances.
