Regenerative Medical Group added a new photo to the album: USA's first Kidney guarantee. January 11, 2015

USA's first Kidney guarantee

RMG is pleased to announce a Kidney guarantee. - a guarantee to prevent a patient from having to go on dialysis.

If kidney function is a stage III or better and the patient is compliant with the RMG Daisy* protocol to preserve kidney function then RMG will guarantee the patient will not have to go on dialysis or they pay NO out of pocket expenses.

These patients progress from stage II to stage III and finally stage IV and dialysis. RMG has a protocol utilizing stem cells that can reverse this progression and preserve kidney function.

The majority of the protocol is covered by PPO and Medicare insurance however the stem cell requirement is NOT covered by insurance.

DAISY protocol

- Dietary intervention
- ACE inhibitor or ARB
- IV therapy- to include stem cells
- Smoking cessation
- Your daily exercise

Tracking symptoms is required for success, periodic lab and weekly IVs.

Any questions?
call us at:
(888) 599-STEM or (888) 599 7836
or send us an Email at:

We are located in la jolla, orange and upland
We will coordinate an appointment in any location you prefer.

USA's first kidney guarantee

The image shows a Facebook post from the page 'Regenerative Medical Group'. The post is dated January 15, 2015, and is part of an album titled 'HELP-HOPE'. The text of the post asks if the reader has experienced frustration or grief from a doctor's diagnosis and lists several common phrases: 'Your pain management case is too complex.', 'Your disease is out of my league.', 'You have too many symptoms to be properly diagnosed.', and 'Your symptoms are in your head.' The post then states that Regenerative Medical Group is here to provide help and hope through advanced stem cell therapy for various conditions, including stroke, head injuries, kidney and liver disease, dementia, depression, diabetes, autism, Parkinson's, and lung diseases. It encourages joining the 'HELP-HOPE' campaign by sharing experiences. Below the text is a photograph of a smiling doctor in a white coat with a stethoscope, standing in front of a diverse group of smiling people, including a woman, a man, and a child. At the bottom of the photo is the 'HELP HOPE' logo, with the tagline 'We give YOU Help and Hope where YOU and others have given up'.

Regenerative Medical Group added a new photo to the album: HELP-HOPE. January 15, 2015 · 🌐

Have you experienced the frustration and grief by being told from your Doctor that your disease and/or condition cannot be helped?

"Your pain management case is too complex."

"Your disease is out of my league."

"You have too many symptoms to be properly diagnosed."

"Your symptoms are in your head."

At Regenerative Medical Group we are here to give you the HELP and HOPE you deserve. We have had the opportunity to help hundreds of hopeless patients who have suffered from Stroke, Head Injuries, Kidney and Liver Disease, Dementia, Depression, Diabetes, Autism, Parkinson's, and Lung Diseases by using the most advance Stem Cell Therapy in the world. Join our "HELP-HOPE" campaign by sharing below your experiences as a patient and how we can give you the help and hope you deserve. #helphopecampaign

Question: Can you guess how many stem cells your body will receive in just one Amniotic stem cell infusion?
Answer: Your body will receive more than 1 million strong, healthy cells that will rejuvenate and restore any damages and/or diseased areas through out your entire body

Stem Cell Miracles made in the USA

█████ came to RMG blinded by Macular Degeneration a disease of the eyes that happens to some older people. She was introduced to our office by █████ her caregiver of 7 years. █████ knew Dr. Henderson was treating patients with real Stem Cell injections and infusions. █████ had never seen █████ and they requested an infusion of stem Cells in an attempt to help █████ see. It was a success! In 4 to 5 days █████ could see lines and shadows. After 7 to 10 days █████ could read large type and within 2 weeks she could read the menu as she sat in her nursing home. She stated █████ had beautiful eyes and a friendly smile. The transformation was amazing, emotional and inspiring. Today █████ states she can see about 85%. She watches television. She and █████ have their favorite programs.

Regenerative Medical Group
February 26, 2015 · Orange, CA ·

Meet [REDACTED] he suffered from Osteoarthritis in his knee. Watch this video to hear John's experience with Stem Cells!

"I worked in the tire business for over 35 years. For the past three years I was taking a high dose of pain medication daily for my knee. After two weeks of receiving Stem Cell therapy from RMG, I am absolutely amazed! Stem Cells gave me a new life. Now I can enjoy retirement pain free!"

Regenerative Medical Group offers stem cell injections (GPRP® included) for many conditions, including:

- Spinal arthritis of neck and back
- Extremity arthritis including shoulder, hip, knee, and ankle arthritis
- Sacroiliac joint arthritis
- Rotator cuff tendonitis and tears
- Achilles tendonitis
- Degenerative Disc Disease
- Lateral Epicondylitis (Tennis Elbow)
- Medial Epicondylitis (Golfer's Elbow)
- Ligament Sprains
- Muscle Strains
- Peripheral Arterial Disease

How are these injections different from cortisone shots?
Stem cell injections have the goal of making NEW CELLS wear there was damaged tissue which provides pain relief.
Cortisone injections simply provide anti-inflammatory medicine to reduce pain, but no regenerative cells or growth factors that lead to repair or new cells.

Here is a great example of a stem cell treatment for a rotator cuff tear. Normally a tear would need a surgical procedure for repair. However, as you can see the stem cell therapy for the rotator cuff tear allowed it to heal without surgery by making NEW CELLS !

Regenerative Medical Group added a new photo to the album: Say No to Parkinson's. March 1, 2015 ·

Say No to Parkinson's today!

What is Parkinson's Disease?
 Parkinson's disease (PD) belongs to a group of conditions called motor system disorders, which are the result of the loss of dopamine-producing brain cells. The four primary symptoms of PD are tremor, or trembling in hands, arms, legs, jaw, and face; rigidity, or stiffness of the limbs and trunk; bradykinesia, or slowness of movement; and postural instability, or impaired balance and coordination. As these symptoms become more pronounced, patients may have difficulty walking, talking, or completing other simple tasks. PD usually affects people over the age of 50. Early symptoms of PD are subtle and occur gradually. In some people the disease progresses more quickly than in others. As the disease progresses, the shaking, or tremor, which affects the majority of people with PD may begin to interfere with daily activities. Other symptoms may include depression and other emotional changes; difficulty in swallowing, chewing, and speaking; urinary problems or constipation; skin problems; and sleep disruptions. There are currently no blood or laboratory tests that have been proven to help in diagnosing sporadic PD. Therefore the diagnosis is based on medical history and a neurological examination. The disease can be difficult to diagnose accurately. Doctors may sometimes request brain scans or laboratory tests in order to rule out other diseases.

How do Stem Cells help?
 Parkinson's disease impacts multiple areas of the brain due to a deficiency in a neurotransmitter – dopamine. The loss of neurons in an area of the brain called the substantia nigra causes a decrease in the production of dopamine in Parkinson's disease. Stem cells make NEW cells in the substantia nigra providing an increase in dopamine which alleviates the tremor and motor problems of the disease. Other areas of the brain utilize dopamine for motivation, cognition, and emotions so these area are helped with the NEW cells made possible by stem cells.

Regenerative Medical Group (RMG) provides the opportunity for every appropriate patient to benefit from Stem Cells. Many innovative procedures at RMG continue to increase in popularity. This is because at RMG we focus on patient satisfaction and optimal outcomes. Our therapies are individualized. Since we have hundreds of patient with successful results we have been able to identify patterns of where stem cells make NEW cells. This is one of our advantages in helping you ! We use the most optimal stem cells for each patient. Usually we strive for pluri-potential cells because these stem cells can differentiate into whatever your body needs. We strive to create the most powerful stem solution as well. Most powerful means we determine not only the number of stem cells but also the percent that are alive and the percent purity for each type of stem cell.

Any questions?
 Give us a call at (888) 599 7836 or send us an Email to info@stemcell.life We are located in California (Irvine, la jolla, orange and upland) We will coordinate an appointment in any location you prefer.

Regenerative Medical Group added a new photo to the album: Stem Cell Heart Repair at RMG
March 18, 2015

Stem Cell Heart Repair at RMG

RMG now offers the USA's first Heart repair guarantee™. We guarantee the success of RMG's Stem Cell therapy combined with echocardiography testing to easily identify the improvement in your Ejection fraction (EF)*

*Ejection fraction (EF) is a measurement of the percentage of blood leaving your heart each time it contracts.

We at RMG are very excited to share how Stem Cells can repair damaged hearts and/or make hearts stronger than ever.

What is a Heart Attack?

Your heart muscle needs oxygen to survive. A heart attack occurs when the blood flow that brings oxygen to the heart muscle is severely reduced or cut off completely. This happens because coronary arteries that supply the heart muscle with blood flow can slowly become narrow from buildup of fat, cholesterol and other substances that together are called plaque. This slow process is known as atherosclerosis. When plaque in a heart artery breaks, a blood clot forms around the plaque. This blood clot can block the blood flow through the heart muscle. When the heart muscle is starved for oxygen and nutrients, it is called Ischemia. When damage or death of part of the heart muscle occurs as a result of Ischemia, it is called a heart attack or Myocardial Infarction.

How do Stem Cells help?

Stem Cells helping the heart heal itself!

Heart attacks occur when there is no blood flow and oxygen being sent to the heart muscle. Stem Cells stimulate Angiogenesis, making NEW blood vessels!

Stem cells are nature's own transformers. When the body is injured, stem cells travel the scene of the accident. These new blood vessels then repair the damaged area by bringing the healing and growth factors needed, as well as improving the strength of the heart muscle for contraction.

We can help Heart Attack, Heart Failure and Bypass Patients.

Watch the Watch the Testimonial of [REDACTED]
<https://www.youtube.com/watch?v=JH5PT6NJBm>

Can stem cell therapy help patients with chronic kidney disease?

Yes it can. It can make new cells that replace damaged cells and reverse chronic kidney disease symptoms. RMG offers patients access to chronic kidney disease stem cell therapy using amniotic stem cells. These chronic kidney disease stem cell treatments improve complications in patients with chronic kidney disease. These procedures help patients who don't respond to typical drug treatments, want to reduce their reliance on medication, or are looking to try stem cell therapy before starting a lifelong drug treatment.

Eye with Degenerated Macula

Regenerative Medical Group ✓
November 21, 2015 · 🌐

👍 Like Page

Regenerative Medical Group is excited to introduce a true medical breakthrough that is giving hope, and sight, back to patients who suffer from age-related Macular Degeneration. Imagine how great your life would be if you could go to the movies again. Read. Drive a car. In short—get your life back. And get rid of the fear of going blind.

This isn't science fiction. It isn't a clinical trial. After decades of medical research this treatment is here now. Today. It's called Stem Cell Therapy and, even if you haven't responded to typical drug treatment, it can truly produce a miracle for you.

Most of the patients who have received this treatment notice less blurriness while reading, have less difficulty recognizing faces and no longer require a bright light when doing any sort of close work. They've also experienced a decrease in the white spot or blurred dark spot caused by the disease as well as an increase in their ability to adapt to low levels of light.

Example: One week after receiving Stem Cell Therapy, a woman with advanced Macular Degeneration could see forms and lines. A few weeks later, she was able to see images and recognize faces. Several weeks after that, her vision was restored. Now, instead of suffering through a long life of blindness, her future is looking brighter than ever.

Here's how it works. Stem cells are capable of replacing damaged cells within your eyes with healthy ones. The result? You'll be able to see colors, shapes and fine details again. They may improve your overall health as well. So, even if you're currently suffering from blurriness or have been declared legally blind, it's absolutely possible to regain your sight.

You'll be happy to know that Stem Cell Therapy works for both wet and dry Macular Degeneration. Early diagnosis and early treatment translates into a more successful result. So it's important to act quickly after diagnosis.

Macular Degeneration is the leading cause of vision loss, affecting over 10 million Americans—that's more than glaucoma and cataracts combined. Until now it was considered incurable and patients could only look forward to a progressive loss of vision and eventual blindness.

That's why we're so excited to tell you that Stem Cell Therapy has improved the eyesight of 100% of the patients who have received it. 100%! Which means, even if you're legally blind, you can expect a significant improvement in your vision.

This is no cookie cutter, one-size-fits-all treatment. Therapy is customized according to each patient's individual needs—so you can be sure your outcome will be the best it can be.

One of the truly great medical miracles of our time is right here, right now. Hundreds of patients have already been helped by this incredible breakthrough in the treatment of Macular Degeneration.

Now it's your turn.

You owe it to yourself to learn more about Stem Cell Therapy. Get your vision and your life back. Contact us today.

Sincerely,
Regenerative Medical Group

Every single day, people are being affected by osteoarthritis. Osteoarthritis is the most common form of arthritis and is a degenerative joint disease, causing pain, swelling and stiffness. As time goes on, it can cause a limp, and even complete loss of mobility.

Is this happening to you? Have you noticed a decline in the things that you are able to do because it's not easy to get around anymore? Does it hurt to get out of bed? Or get out of a chair?

For years, surgery for osteoarthritis has been seen as unavoidable. In order to get better and gain mobility, it would involve going under the knife.

What if surgery was no longer required? What if you could avoid surgery entirely?

At the Regenerative Medical Group, stem cell therapy is being used to improve osteoarthritis conditions. It is a cutting edge treatment that offers regeneration- Making new cells.

Ultimately, stem cells and the patient's own blood is used in order to create an injection into the joints. PRP or platelet rich plasma is used, which helps with wound healing. The PRP is a necessary part of the process as it provides the fibroblastic events that help to remodel the tissues and allow for healing faster. This therapy helps the connective tissue to regenerate for an optimal level of healing. New cells are created inside the body, replacing all old and damaged tissue.

Various benefits come from regenerative cell therapy. If you can avoid invasive joint surgery, you don't have to face the risks of surgery and all the rehabilitation, which can include infection and blood clotting, not to mention the unflattering paper gowns that you would have to wear throughout your stay in the hospital.

Instead of having knee surgery, injections help. Patients have been calling this a miracle. The process takes about two hours in the office, and very little downtime is required. There is no surgery and no overnight stays in a hospital.

Within a few days, you can start to see results. Within a few weeks, you can get off the painkillers that you have been dependent on, possibly for years. Within a few weeks, you can experience a substantial improvement in the way you are able to move and get around. Within a Month, you could be doing all of the things that you used to love doing, but have stopped because of having unhealthy knee joints.

From damaged tissue to degenerated cartilage, there are all sorts of reasons for not being able to do the things you love to do. Osteoarthritis affect your knees, hands, hips, elbows, lower back, or even neck.

You don't really want to go under the knife, do you? Of course not.

Stem cell therapy is an established relatively new treatment, and your current doctor may not have discussed the possibility with you because he/she is still learning about the treatment.

While your doctor learns, you aren't seeing any improvements and probably getting worse. You have the chance now to act now and schedule a free consultation with the Regenerative Medical Group and discuss this cutting edge stem cell therapy.

Conventional medicine and treatments may only be masking the pain temporarily. It isn't healing the condition. Isn't it time you start to heal?

It is absolutely possible to repair damaged tissue with this regenerative medicine and regenerative cell therapy is now being used for osteoarthritis. It has the ability to decrease the probability of having surgery substantially – and can eliminate painkillers from your life once and for all.

You have to take control of your life. If you don't want to be immobile and you don't want to be in pain, it's possible to do something. Surgery is now reserved only for the people who suffer from the most severe forms of osteoarthritis. Stem cell therapy may be the way of creating a miracle within your life so that you can regain mobility. Make your New Year's resolution to have a pain-free year.

Check out this 2012 study on stem cell therapy and kidney disease:
 "Preliminary data show that renal function was well preserved post-operatively for up to 16 months and none of the patients required haemodialysis, whereas 20% of case controls developed ARF. The length of hospital stay and readmission rates in study patients were reduced by 40%. Infusion of allogeneic MSC was safe as no adverse events were observed to be related to this novel therapy."

Regenerative Medical Group added a new photo to the album: Autism Treatment.
 July 6, 2016 ·

If your loved one struggles with Autism, you know how tough day-to-day life can be. You understand the frustration that comes with the condition, particularly when planning activities or making decisions regarding education. We understand that. You're protective, you're worried, and you certainly don't want to be signing your child up for some fly-by-night treatment.

Our express goal is to improve the lives of our patients using the safest breakthrough treatments in stem cell research. Plain and simple. Our past ASD patients have reported improvements in:

- ▶ SOCIAL INTERACTION
- ▶ LOWER SEIZURE FREQUENCY
- ▶ LOWER AGGRESSION
- ▶ IMPULSIVE BEHAVIOR
- ▶ SENSORY AWARENESS
- ▶ RESPONSIVENESS

To determine if your loved one, may qualify for Autism Stem Cell Therapy, it is necessary to ask some medical questions.
 Please be assured that all information you provide will only be used to determine eligibility for this treatment opportunity.
 Please follow the link below to start the questionair:

At a molecular level, the transcriptional factor, nuclear factor-κB (NF-κB) DNA binding activity was found elevated in peripheral blood samples of children with autism (Naik et al., 2011). NF-κB is an important gene involved in the mediation of inflammation and apoptosis, indicating that pro-inflammatory processes in autism could be up-regulated by this transcriptional factor. Increased NF-κB expression levels were found also in post-mortem samples of orbito-frontal cortex from autistic patients, further indicating a neuro-inflammatory condition (Young et al., 2011). Peripheral blood mononuclear cells (PBMCs) demonstrate significant aberrations in autistic children (Siniscalco et al., 2012c). In autism, these cells are committed to a pro-inflammatory state, via significantly more pro-inflammatory cytokines, including TNFα and several interleukins, IL-1β and IL-6. The ratio of pro-inflammatory/anti-inflammatory cytokines, TNFα/tumor necrosis factor receptor II (TNFR-II) was also higher in autistic patients (Jyonouchi et al., 2001). The pro-inflammatory cytokine IL-6 was found increased also in the cerebellum of autistic children (Wei et al., 2011).

RMG is an innovative group of multifaceted clinicians dedicated to optimizing patient outcomes by individualizing and tailoring treatments to meet each patient's needs. All patients are monitored to optimize and enhance the outcome of the numerous treatments offered. RMG has revolutionized the medical field by introducing and applying Stem Cells to all types of therapies.

To date we have helped to enhance the lives of patients with Head injuries, Stroke, Arthritis, Parkinson's, COPD, Macular Degeneration, Dementia, Depression, Diabetes and many other illnesses. Rare disorders such as Charcot-Marie-Tooth, Neurofibromatosis, and some Autism are benefiting as well.
